When the collapse of a super massive black hole is recorded it will probably be reported that a black hole has disappeared. This book is the only publication to date that has predicted the event in advance and has documented the physics required to explain how and why this is an event that occurs frequently in the universe. The discovery of dark matter and dark energy required a review of physics that was not available to the giants on whose shoulders we now stand. Fractal Physics explains why the universe dances to the tune of black holes.
