Smart Systems Integration and Simulation

Smart Systems Integration and Simulation

This book presents new methods and tools for the integration and simulation of smart devices. The design approach described in this book explicitly accounts for integration of Smart Systems components and subsystems as a specific constraint. It includes methodologies and EDA tools to enable multi-disciplinary and multi-scale modeling and design, simulation of multi-domain systems, subsystems and components at all levels of abstraction, system integration and exploration for optimization of functional and non-functional metrics.

By covering theoretical and practical aspects of smart device design, this book targets people who are working and studying on hardware/software modelling, component integration and simulation under different positions (system integrators, designers, developers, researchers, teachers, students etc.). In particular, it is a good introduction to people who have interest in managing heterogeneous components in an efficient and effective way on different domains and different abstraction levels. People active in smart device development can understand both the current status of practice and future research directions.

- Provides a comprehensive overview of smart systems design, focusing on design challenges and cutting-edge solutions;
- Enables development of a co-simulation and co-design environment that accounts for the peculiarities of the basic subsystems and components to be integrated;
- Describes development of modeling and design techniques, methods and tools that enable multi-domain simulation and optimization at various levels of abstraction and across different technological domains.

From reader reviews:

Connie Griffin:

This Smart Systems Integration and Simulation book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is usually information inside this book incredible fresh, you will get facts which is getting deeper you read a lot of information you will get. This Smart Systems Integration and Simulation without we know teach the one who looking at it become critical in pondering and analyzing. Don't always be worry Smart Systems Integration and Simulation can bring when you are and not make your carrier space or bookshelves' turn into full because you can have it inside your lovely laptop even cell phone. This Smart Systems Integration and Simulation having fine arrangement in word along with layout, so you will not experience uninterested in reading.

Lucille Roller:

Information is provisions for individuals to get better life, information currently can get by anyone on everywhere. The information can be a information or any news even restricted. What people must be consider while those information which is in the former life are hard to be find than now could be taking seriously which one works to believe or which one the resource are convinced. If you obtain the unstable resource then you understand it as your main information you will see huge disadvantage for you. All those possibilities will not happen inside you if you take Smart Systems Integration and Simulation as your daily resource information.

Richard Cary:

Reading a guide can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book thus. There are a lot of reasons why people love it. First reading a e-book will give you a lot of new info. When you read a reserve you will get new information mainly because book is one of a number of ways to share the information or maybe their idea. Second, reading through a book will make an individual more imaginative. When you looking at a book especially fictional works book the author will bring someone to imagine the story how the figures do it anything. Third, it is possible to share your knowledge to some others. When you read this Smart Systems Integration and Simulation, you are able to tells your family, friends as well as soon about yours publication. Your knowledge can inspire the mediocre, make them reading a e-book.

Kelley Hardy:

As a student exactly feel bored for you to reading. If their teacher inquired them to go to the library or make summary for some guide, they are complained. Just little students that has reading's internal or real their leisure activity. They just do what the educator want, like asked to go to the library. They go to at this time there but nothing reading really. Any students feel that studying is not important, boring in addition to can't see colorful pictures on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this period of time, many ways to get whatever you want. Likewise word says, ways to reach

Chinese's country. Therefore this Smart Systems Integration and Simulation can make you experience more interested to read.
