**Developmental Neurobiology of the Autonomic Nervous System (Contemporary Neuroscience)** Phyllis M. Gootman

This book, covering many key aspects of autonomic nervous system maturation, was suggested by the success of a symposium on the developing autonomic nervous system held at the Spring 1982 meeting of the Federation of American Scientists for Experimental Biology (Federation Proceedings 1983, 42, 1609). It was obvious from the FASEB symposium that there is increasing interest in the developing autonomic nervous system, particularly with respect to its role in regulating visceral function. Some additional topics that were not covered in the FASEB symposium are also included in this book. The editor feels that the readers of this volume are, in all probability, already cognizant of the state of knowledge of the adult autonomic nervous system. Therefore, a review of classical autonomic physiology, pharmacology, and neuroanatomy is not provided. For a recent detailed discussion of the ontogeny and phylogeny of the developing nervous system, I would recommend the book published not long ago by D. Purves and J. W. Lichtman, *Principles of Neural Development* (Sinauer, Sunderland, MA, 1985). Another recent book, *Autonomic Nerve Function in the Vertebrates* by F. Nilsson (Springer-Verlag, New York, 1984), presents a comparative examination of autonomic nervous system function in vertebrates. For a summary of recent advances in the many aspects of catecholamines as they bear on autonomic nervous system research, I would recommend the series of three books edited by E.
