GABAPENTIN (By Mouth): Helps Control Partial Seizures (Convulsions) in the Treatment of Epilepsy and Relieves the Pain of Postherpetic Neuralgia (caused by Shingles) James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.”

GABAPENTIN is used to help control partial seizures (convulsions) in the treatment of epilepsy. This medicine cannot cure epilepsy and will only work to control seizures for as long as you continue to take it.

Gabapentin is also used in adults to manage a condition called postherpetic neuralgia, which is pain that occurs after shingles. Gabapentin works in the brain to prevent seizures and relieve pain for certain conditions in the nervous system. It is not used for routine pain caused by minor injuries or arthritis.

Gabapentin is an anticonvulsant. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—GABAPENTIN. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
