**Practical Signal Processing and its Applications, Parts I & II: with solved homework problems** Sharad R. Laxpati, Vladimir Goncharoff

This is a textbook introducing signal processing to electrical and computer engineering university students. Parts I & II cover the Fourier analysis of signals and systems in discrete and continuous time domains, Laplace transform, Z transform, sampling theory, and their practical applications. A unique approach is taken whereby discrete and continuous signal processing concepts are presented side-by-side, on pages opposite each other, in the introductory chapters of the text.
