## The Construction of Mental Representations During Reading

This volume presents in-depth investigations of the processes of meaning-making during reading at both local (discourse) and global (general knowledge) levels. It considerably extends our knowledge of how mental representations are constructed and updated during reading. The book also provides insight into the process of representation construction by using online measures and relating this process with final memory representations; provides detailed models of these processes; pays attention to the coordination of multiple representations constructed; focuses on the monitoring and updating of mental representations; and applies all this knowledge to richer and more complicated texts than are often used in laboratories.
