Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) E.E. Moise

Geometric topology may roughly be described as the branch of the topology of manifolds which deals with questions of the existence of homeomorphisms. Only in fairly recent years has this sort of topology achieved a sufficiently high development to be given a name, but its beginnings are easy to identify. The first classic result was the SchOnflies theorem (1910), which asserts that every 1-sphere in the plane is the boundary of a 2-cell. In the next few decades, the most notable affirmative results were the "Schonflies theorem" for polyhedral 2-spheres in space, proved by J. W. Alexander [Ad, and the triangulation theorem for 2-manifolds, proved by T. Rad6 [Rd. But the most striking results of the 1920s were negative. In 1921 Louis Antoine [A] published an extraordinary paper in which he 4 showed that a variety of plausible conjectures in the topology of 3-space were false. Thus, a (topological) Cantor set in 3-space need not have a simply connected complement; therefore a Cantor set can be imbedded in 3-space in at least two essentially different ways; a topological 2-sphere in 3-space need not be the boundary of a 3-cell; given two disjoint 2-spheres in 3-space, there is not necessarily any third 2-sphere which separates them from one another in 3-space; and so on and on. The well-known "horned sphere" of Alexander [A] appeared soon thereafter.

From reader reviews:

Anthony Doucet:

Throughout other case, little men and women like to read book Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics). You can choose the best book if you love reading a book. Given that we know about how is important some sort of book Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics). You can add information and of course you can around the world by just a book. Absolutely right, mainly because from book you can learn everything! From your country right up until foreign or abroad you may be known. About simple factor until wonderful thing you are able to know that. In this era, we can easily open a book or searching by internet product. It is called e-book. You need to use it when you feel fed up to go to the library. Let's go through.

Alison Caulfield:

Book is actually written, printed, or illustrated for everything. You can realize everything you want by a guide. Book has a different type. As we know that book is important factor to bring us around the world. Alongside that you can your reading ability was fluently. A guide Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) will make you to always be smarter. You can feel far more confidence if you can know about almost everything. But some of you think this open or reading the book make you bored. It is not make you fun. Why they can be thought like that? Have you seeking best book or suited book with you?

Odis Hillyard:

Nowadays reading books become more than want or need but also work as a life style. This reading practice give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The data you get based on what kind of book you read, if you want have more knowledge just go with training books but if you want truly feel happy read one having theme for entertaining like comic or novel. Typically the Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) is kind of e-book which is giving the reader unforeseen experience.

Laura Bradberry:

You can find this Geometric Topology in Dimensions 2 and 3 (Graduate Texts in Mathematics) by visit the bookstore or Mall. Simply viewing or reviewing it could possibly to be your solve issue if you get difficulties for your knowledge. Kinds of this reserve are various. Not only by written or printed but in addition can you enjoy this book through e-book. In the modern era like now, you just looking by your local mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still update. Let's try to choose proper ways for you.
