Dynamics AX 2012 Blueprints: Creating Lifecycle Services Business Process Models

Murray Fife

Dynamics AX 2012 Blueprints: Creating Lifecycle Services Business Process Models Murray Fife The Task Recorder has always been a useful tool within Dynamics AX, but with the release of Lifecycle Services, it has been upgraded to become even more useful. Now the Task Recorder includes the ability to group your recordings into separate frameworks for different purposes, and also allows you to create a hierarchy structure that you can use to organize your tasks and recordings. In addition to being able to export your task recordings out to Word etc. for off-line documentation, it also allows you to package up all of the business process structures and import them into Lifecycle Services to use them for managing your project and also collaborating with customers and partners. All of the task recordings are converted to process flow charts within Lifecycle Services to that you can adjust the standard business processes to match your requirements, and also all of the task recordings are viewable as live videos making them a centralized documentation tool for all the key business areas during and after the implementation. In this blueprint we will show how you can set up and configure the business processes within the Task Recorder, create task recordings, and then import the business processes into Lifecycle Services to make them available through via the cloud.
