Materials: Introduction and Applications

Witold Brostow, Haley E. Hagg Lobland

Materials: Introduction and Applications Witold Brostow, Haley E. Hagg Lobland

Presents a fully interdisciplinary approach with a stronger emphasis on polymers and composites than traditional materials books

Materials science and engineering is an interdisciplinary field involving the properties of matter and its applications to various areas of science and engineering. Polymer materials are often mixed with inorganic materials to enhance their mechanical, electrical, thermal, and physical properties. *Materials: Introduction and Applications* addresses a gap in the existing textbooks on materials science.

This book focuses on three Units. The first, Foundations, includes basic materials topics from Intermolecular Forces and Thermodynamics and Phase Diagrams to Crystalline and Non-Crystalline Structures. The second Units, Materials, goes into the details of many materials including Metals, Ceramics, Organic Raw Materials, Polymers, Composites, Biomaterials, and Liquid Crystals and Smart Materials. The third and final unit details Behavior and Properties including Rheological, Mechanical, Thermophysical, Color and Optical, Electrical and Dielectric, Magnetic, Surface Behavior and Tribology, Materials, Environment and Sustainability, and Testing of Materials.

Materials: Introduction and Applications features:

- Basic and advanced Materials concepts
- Interdisciplinary information that is otherwise scattered consolidated into one work
- Links to everyday life application like electronics, airplanes, and dental materials

Certain topics to be discussed in this textbook are more advanced. These will be presented in shaded gray boxes providing a two-level approach. Depending on whether you are a student of Mechanical Engineering, Electrical Engineering, Engineering Technology, MSE, Chemistry, Physics, etc., you can decide for yourself whether a topic presented on a more advanced level is not important for you—or else essential for you given your professional profile

Witold Brostow is Regents Professor of Materials Science and Engineering at the University of North Texas. He is President of the International Council on Materials Education and President of the Scientific Committee of the POLYCHAR World Forum on Advanced Material (42 member countries). He has three honorary doctorates and is a Member of the European Academy of Sciences, Member of the National Academy of Sciences of Mexico, Foreign Member of the National Academy of Engineering of Georgia in Tbilisi and Fellow of the Royal Society of Chemistry in London. His publications have been cited more than 7200 times.

Haley Hagg Lobland is the Associate Director of LAPOM at the University of North Texas. She is a Member of the POLYCHAR Scientific Committee. She has received awards for her research presented at conferences in: Buzios, Rio de Janeiro, Brazil; NIST, Frederick, Maryland; Rouen, France; and Lviv, Ukraine. She has lectured in a number of countries including Poland and Spain. Her publications include joint ones with colleagues in Egypt, Georgia, Germany, India, Israel, Mexico, Poland, Turkey and United Kingdom.

From reader reviews:

Jacquelyn Lopez:

Book is actually written, printed, or illustrated for everything. You can know everything you want by a publication. Book has a different type. As we know that book is important factor to bring us around the world. Close to that you can your reading talent was fluently. A e-book Materials: Introduction and Applications will make you to possibly be smarter. You can feel considerably more confidence if you can know about anything. But some of you think that will open or reading a new book make you bored. It is far from make you fun. Why they might be thought like that? Have you in search of best book or appropriate book with you?

Edward Florez:

What do you think about book? It is just for students since they're still students or the idea for all people in the world, the particular best subject for that? Only you can be answered for that question above. Every person has several personality and hobby per other. Don't to be obligated someone or something that they don't need do that. You must know how great along with important the book Materials: Introduction and Applications. All type of book can you see on many sources. You can look for the internet solutions or other social media.

Nona Smith:

Now a day those who Living in the era where everything reachable by connect to the internet and the resources within it can be true or not need people to be aware of each info they get. How a lot more to be smart in obtaining any information nowadays? Of course the reply is reading a book. Reading a book can help folks out of this uncertainty Information especially this Materials: Introduction and Applications book because this book offers you rich data and knowledge. Of course the info in this book hundred per cent guarantees there is no doubt in it you probably know this.

Cheri Tow:

This Materials: Introduction and Applications tend to be reliable for you who want to be described as a successful person, why. The reason why of this Materials: Introduction and Applications can be one of many great books you must have is giving you more than just simple examining food but feed anyone with information that might be will shock your preceding knowledge. This book is actually handy, you can bring it everywhere and whenever your conditions in e-book and printed versions. Beside that this Materials: Introduction and Applications giving you an enormous of experience including rich vocabulary, giving you demo of critical thinking that could it useful in your day pastime. So , let's have it and revel in reading.
