The Microarchitecture of Pipelined and Superscalar Computers Amos R. Omondi

This book is intended to serve as a textbook for a second course in the implementation (Le. microarchitecture) of computer architectures. The subject matter covered is the collection of techniques that are used to achieve the highest performance in single-processor machines; these techniques center the exploitation of low-level parallelism (temporal and spatial) in the processing of machine instructions. The target audience consists students in the final year of an undergraduate program or in the first year of a postgraduate program in computer science, computer engineering, or electrical engineering; professional computer designers will also find the book useful as an introduction to the topics covered. Typically, the author has used the material presented here as the basis of a full-semester undergraduate course or a half-semester post graduate course, with the other half of the latter devoted to multiple-processor machines. The background assumed of the reader is a good first course in computer architecture and implementation - to the level in, say, *Computer Organization and Design*, by D. Patterson and H. Hennessy - and familiarity with digital-logic design. The book consists of eight chapters: The first chapter is an introduction to all of the main ideas that the following chapters cover in detail: the topics covered are the main forms of pipelining used in high-performance uniprocessors, a taxonomy of the space of pipelined processors, and performance issues. It is also intended that this chapter should be readable as a brief "stand-alone" survey.

From reader reviews:

Cedric Baker:

The event that you get from The Microarchitecture of Pipelined and Superscalar Computers will be the more deep you searching the information that hide inside words the more you get considering reading it. It doesn't mean that this book is hard to understand but The Microarchitecture of Pipelined and Superscalar Computers giving you buzz feeling of reading. The writer conveys their point in a number of way that can be understood by simply anyone who read this because the author of this guide is well-known enough. This book also makes your vocabulary increase well. It is therefore easy to understand then can go to you, both in printed or e-book style are available. We propose you for having this The Microarchitecture of Pipelined and Superscalar Computers instantly.

Brad Sharpe:

Do you have something that you like such as book? The e-book lovers usually prefer to pick book like comic, quick story and the biggest the first is novel. Now, why not attempting The Microarchitecture of Pipelined and Superscalar Computers that give your pleasure preference will be satisfied simply by reading this book. Reading routine all over the world can be said as the opportunity for people to know world considerably better then how they react when it comes to the world. It can't be stated constantly that reading practice only for the geeky person but for all of you who wants to become success person. So , for all you who want to start studying as your good habit, you may pick The Microarchitecture of Pipelined and Superscalar Computers become your own personal starter.

Lyndsey Lafferty:

In this period of time globalization it is important to someone to acquire information. The information will make you to definitely understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You can view that now, a lot of publisher in which print many kinds of book. The particular book that recommended for you is The Microarchitecture of Pipelined and Superscalar Computers this publication consist a lot of the information with the condition of this world now. This book was represented how do the world has grown up. The vocabulary styles that writer use to explain it is easy to understand. The writer made some investigation when he makes this book. Here is why this book appropriate all of you.

Clara Duke:

On this era which is the greater particular person or who has ability in doing something more are more special than other. Do you want to become one among it? It is just simple method to have that. What you have to do is just spending your time almost no but quite enough to experience a look at some books. One of the books in the top record in your reading list is actually The Microarchitecture of Pipelined and Superscalar Computers. This book which can be qualified as The Hungry Hills can get you closer in getting precious

person. By looking upward and review this publication you can get many advantages.
