Fracture fixation in osteoporotic bone, fixed angle implants, bone morphogenic proteins - these are just a few of the phrases recently heard in discussions on contemporary osteosynthesis. Featuring the proceedings of the 2008 congress of the Federation of European Societies for Surgery of the Hand (FESSH) held in Lausanne, this book provides a comprehensive overview of the state of the art and summarizes the various new developments in osteosynthesis. Basic scientific papers and contributions reporting important clinical applications by leaders in their fields highlight some recent issues such as fracture fixation under special conditions, new implant designs, bone substitutes and outcome measurement after fracture treatment. Hand surgeons, orthopedic and trauma surgeons as well as researchers with an interest in fracture treatment of the upper extremity will find this publication of great interest.
